

Bastián Ibáñez Martínez

Software Engineer · Full-Stack & Applied AI

Profile

Software engineer focused on full-stack products, operational automation, and applied AI. I design systems that connect models, data, and real operations with explicit boundaries, traceability, and recovery paths.

Experience

Lead Software Engineer / NotoriosTI AUG 2025 - PRESENT

- Lead a three-engineer team building AI-powered automation for e-commerce operations.
- Defined the architecture and cloud operation of a multi-specialist agent for production, purchasing, and analysis over ERP data.
- Designed integrations and services for marketplace events, operational monitoring, and secure configuration across environments.

Junior Software Engineer / NotoriosTI MAY 2025 - AUG 2025

- Built the foundations of the operations agent and its messaging and ERP integration.
- Configured GCP infrastructure for services, data, secrets, and container delivery.

Selected projects

- Manufacturing operations platform.** Delivered and deployed full-stack product with traceable inventory, transactional manufacturing, and E2E flows.
- GroupFit.** Hybrid constrained-assignment solver with Excel/JSON output and explanations for unplaced cases.
- go-agent.** Terminal agent in Go with hexagonal architecture, four providers, controlled tools, and persistence.
